

Product Change Notification

PCN-Number / Rev / Date	45259 / 1 / 09.11.2022
Category / change type	ACEL active components / LABEL Labelling / MINOR
Summary	Changeover from printed and affixed to lasered product labels for pressure sensors
Motivation, trigger	Pressure sensors: changeover to lasered labels for durability and resource-saving production
Details of change	The type labels of the STW pressure sensors and STW pressure switches will be successively converted from printed and affixed labels to laser engraving from the fourth quarter of 2022. All previous content including customer-specific adaptations will continue to be mapped. The arrangement of the information on the label has been optimized without compromising readability. All environmental requirements continue to be met, of course. The laser engraving can be scanned without any problems with the barcode readers used up to now. It is not only much more durable than the previously used labels, but also more resource-efficient in production.

Note: STW reserves the right to use printed labels (temporarily) in individual cases, e.g. for technological or other reasons, even after the general changeover to laser engraving.

Company STW TECHNIC, LP
